# What is Global Kids Online

- A research network producing high-quality evidence on children's digital lives.
- Data are collected using a standardized toolbox of **qualitative and quantitative methodologies** developed by EU Kids Online, UNICEF and the London School of Economics.
- So far, Global Kids Online projects have been implemented in **18 countries** with more than **25,000 children** surveyed since 2016.

# Where we work

# Growing up in a connected world

**GLOBAL  
KIDS  
ONLINE**

- Global Kids Online country partners spoke to a total of **14,733 internet-using children** aged **9–17** years between 2016-2018.
- They live in **11 countries:** Albania, Argentina, Brazil, Bulgaria, Chile, Ghana, Italy, Montenegro, the Philippines, South Africa and Uruguay.

# What we've learned from talking to children

## Key takeaways

# Access & activities

---

- **Mobile phones** are the most popular devices used to go online among children.
- The majority of children access the internet **at home**. **School use** is less common, especially for younger children.
- Entertainment activities (e.g. **watching videos or gaming**) are the most popular online activities.
- In general, **older children** engage in more advanced online activities, like **information-seeking and civic engagement**.

# The ladder of online participation

- Children's engagement in online activities as they get older takes the shape of a ladder.
- Most children engage in (and learn from) "entry level" entertainment activities.
- These act as building blocks, allowing children to progress towards more complex activities like civic engagement or content creation as they get older.

## Participating in campaign

Talking about politics, Creating a blog, story or website  
Looking for resources about neighbourhood

Looking  
for news

Talking to  
family or friends

Looking for  
health information

Posting photos  
or comments online

Playing  
online games

Learning by searching, Instant messaging  
Schoolwork, Social media, Watching videos

# Skills & risks

---

- The majority of children in each country report **high privacy skills**.
- But between **30% and 75%** of children say that they may be **unable to verify the truth of online information**.
- **Exposure to risk varies by country.** In general, children who do more online activities experience more online risks, but this doesn't always translate into harm.

# Online risks by country

Internet-using children (%) who said they encountered the following online risks, by country

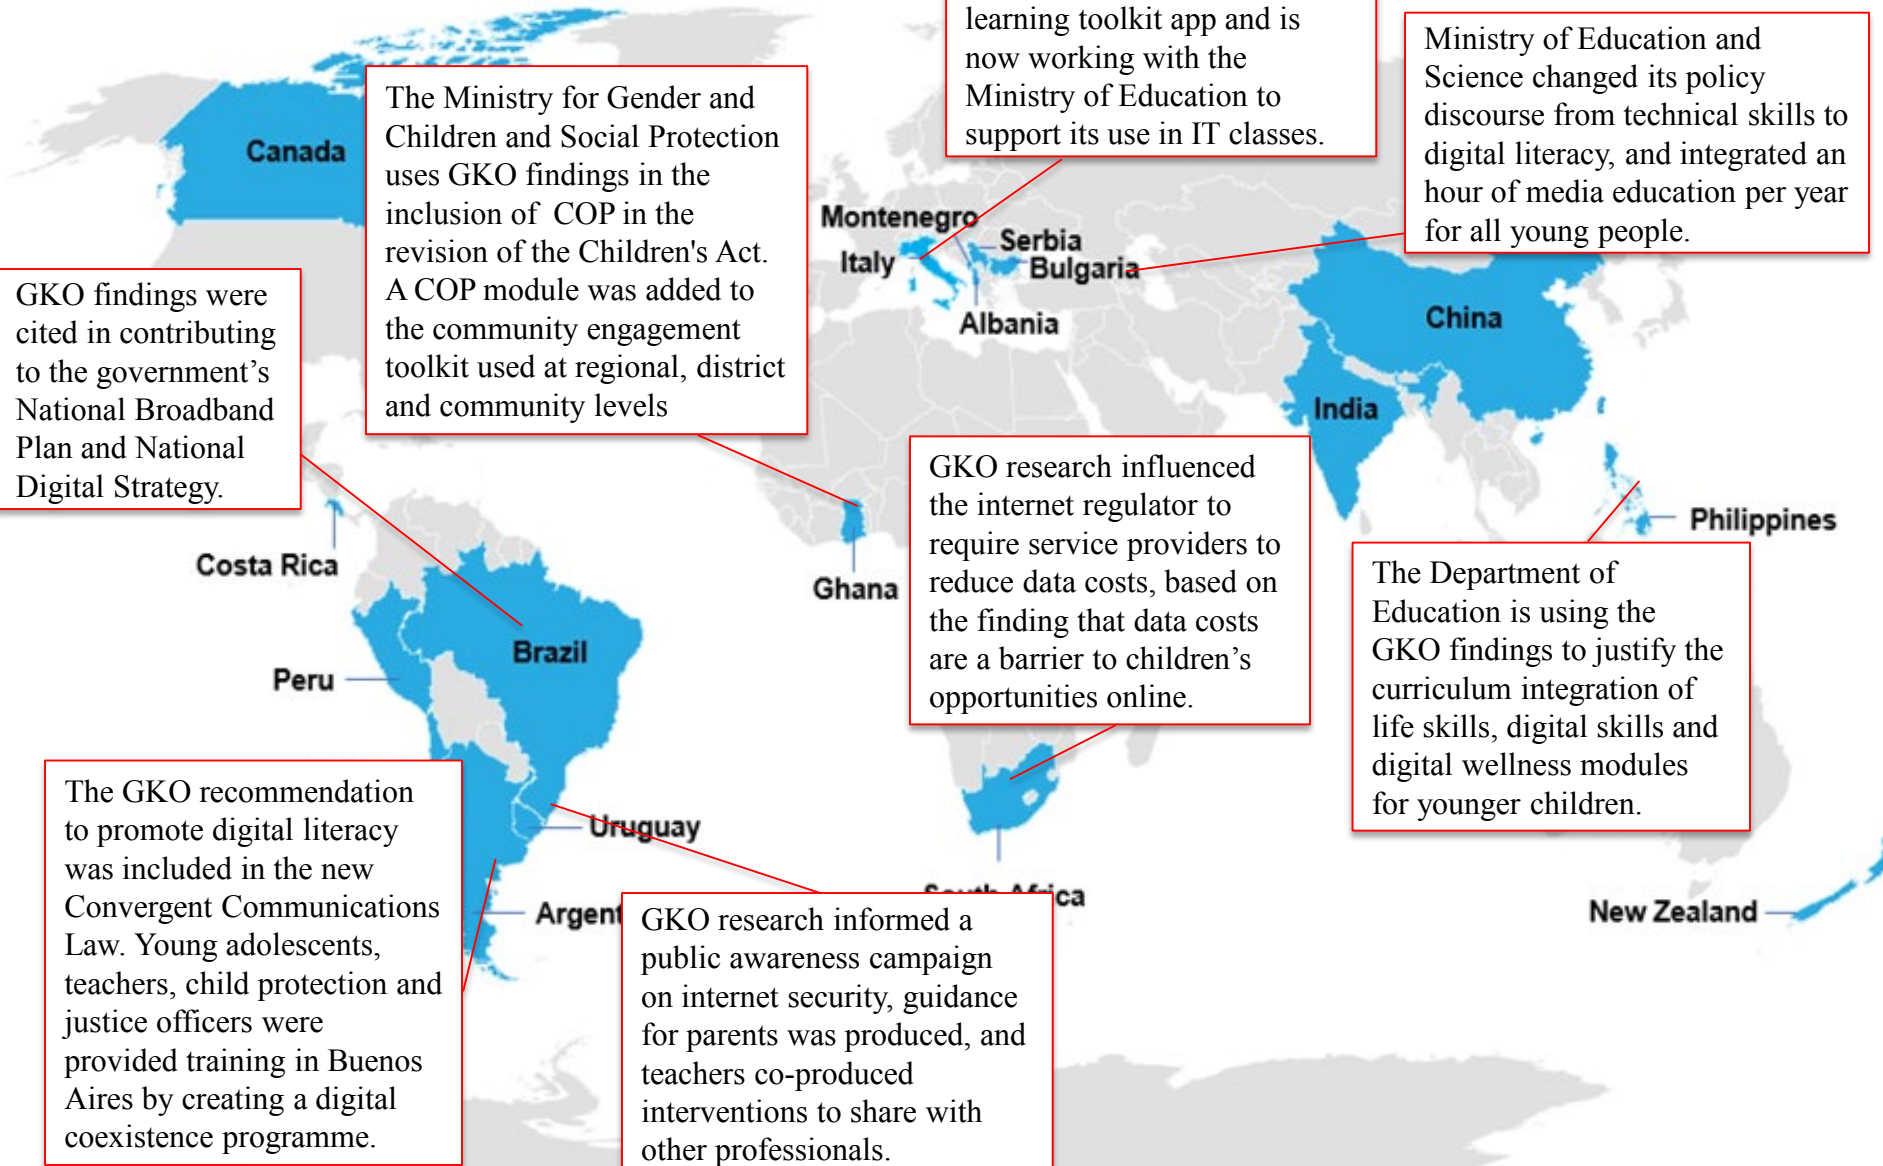

# Parents & caregivers

- Despite increased risk as a consequence of exposure, this does not mean that parents/teachers should restrict children's internet use.
- When parents impose restrictions, children engage in **fewer online activities** and tend to have **weaker digital skills**.
- Parents should provide **supportive mediation**, by engaging with and helping children as they go online. This **improves digital skills**, and slightly **reduces** their exposure to risk.

# Selected impact

# Children's rights in the digital age

Gathering global evidence on children's online rights, opportunities, and risks
