DISRUPTING HARM

DISRUPTING HARM FINDINGS REVEAL NEW AND CRUCIAL INSIGHTS INTO ONLINE CHILD SEXUAL EXPLOITATION AND ABUSE

Disrupting Harm is a large-scale research project generating unique insights on how online child sexual exploitation and abuse is manifesting in 13 countries and providing tailored roadmaps for countries to strengthen their prevention and response systems.

The findings from the first phase of Disrupting Harm are out now and provide crucial insights on online child sexual exploitation and abuse (CSEA), the gaps in existing systems at country level and highlight key recommendations for governments and other stakeholders on tackling online CSEA.

In early 2019, the Safe Online Initiative at End Violence Partnership invested \$7 million to develop Disrupting Harm, a ground-breaking and innovative research project that aims to better understand how digital technology facilitates the sexual exploitation and abuse of children. The Partnership brought together and funded three global organisations – **ECPAT International**, **INTERPOL** and the **UNICEF Office of Research – Innocenti** – to undertake new research in 13 countries across Eastern and Southern Africa and Southeast Asia. This type of high-quality research and assessment is new and unique in that it uses a multi-sector approach and the specific expertise of these three global agencies and their local partners. Additionally, the scalable methodology of DH enables countries to compare results, identify national differences and global similarities, to help policymakers and practitioners understand how this problem needs to be tackled in-country and internationally.

The success of the first phase of the project has led to a renewed \$7 million commitment in 2022 and expansion in 11 countries across 3 new regions.

In 2021, eSafety commissioned the Aussie Kids Online research to explore the opportunities and risks that the internet presents for children in Australia. The research was conducted in August–September 2021 and comprised a national survey of over 3,500 young people aged 8 to 17 and their parents. The survey was an adaptation of the Global Kids Online quantitative methodology.

Findings from Aussie Kids Online will inform eSafety's ongoing online safety programs, including future interventions to assist children to better identify and seek help for online harms, and to assist parents to support their children. This research also aims to contribute to the international evidence base on children's internet use as a member of Global Kids Online.

The first report from Aussie Kids Online – [Mind the Gap: Parental Awareness of Children's Exposure to Risks Online](#) – showed that children experience many benefits from using the internet and those who have had negative experiences online feel empowered and knowledgeable about the actions they can take in response.

Summary of key findings

Online lives

The internet is an important meeting place and platform for cultural expression for Aboriginal and Torres Strait Islander children, who are much more likely than the national average to:

- make new friends or contacts online
- post their own video or music content online
- use the internet to stay informed about the world around them, accessing news sites and regularly engaging in online discussions about social and political problems.

Negative online experiences

Aboriginal and Torres Strait Islander children are almost three times more likely than the national average to have had offensive things said to them because of their race, ethnicity, gender, nationality, sexual orientation, religion, age or

disability.

These negative online experiences can have deep impacts that lead to impaired mental health, perceived reputation damage and lower grades at school.

Online safety awareness

Aboriginal and Torres Strait Islander children are proactive and knowledgeable in responding to negative experiences online, taking such steps as blocking or reporting the perpetrator and informing authorities about the incident.

While their parents are more likely than the Australian average to instruct their child on ways to use the internet safely, regularly monitor their child's online activities and use parental control tools such as blocking software.

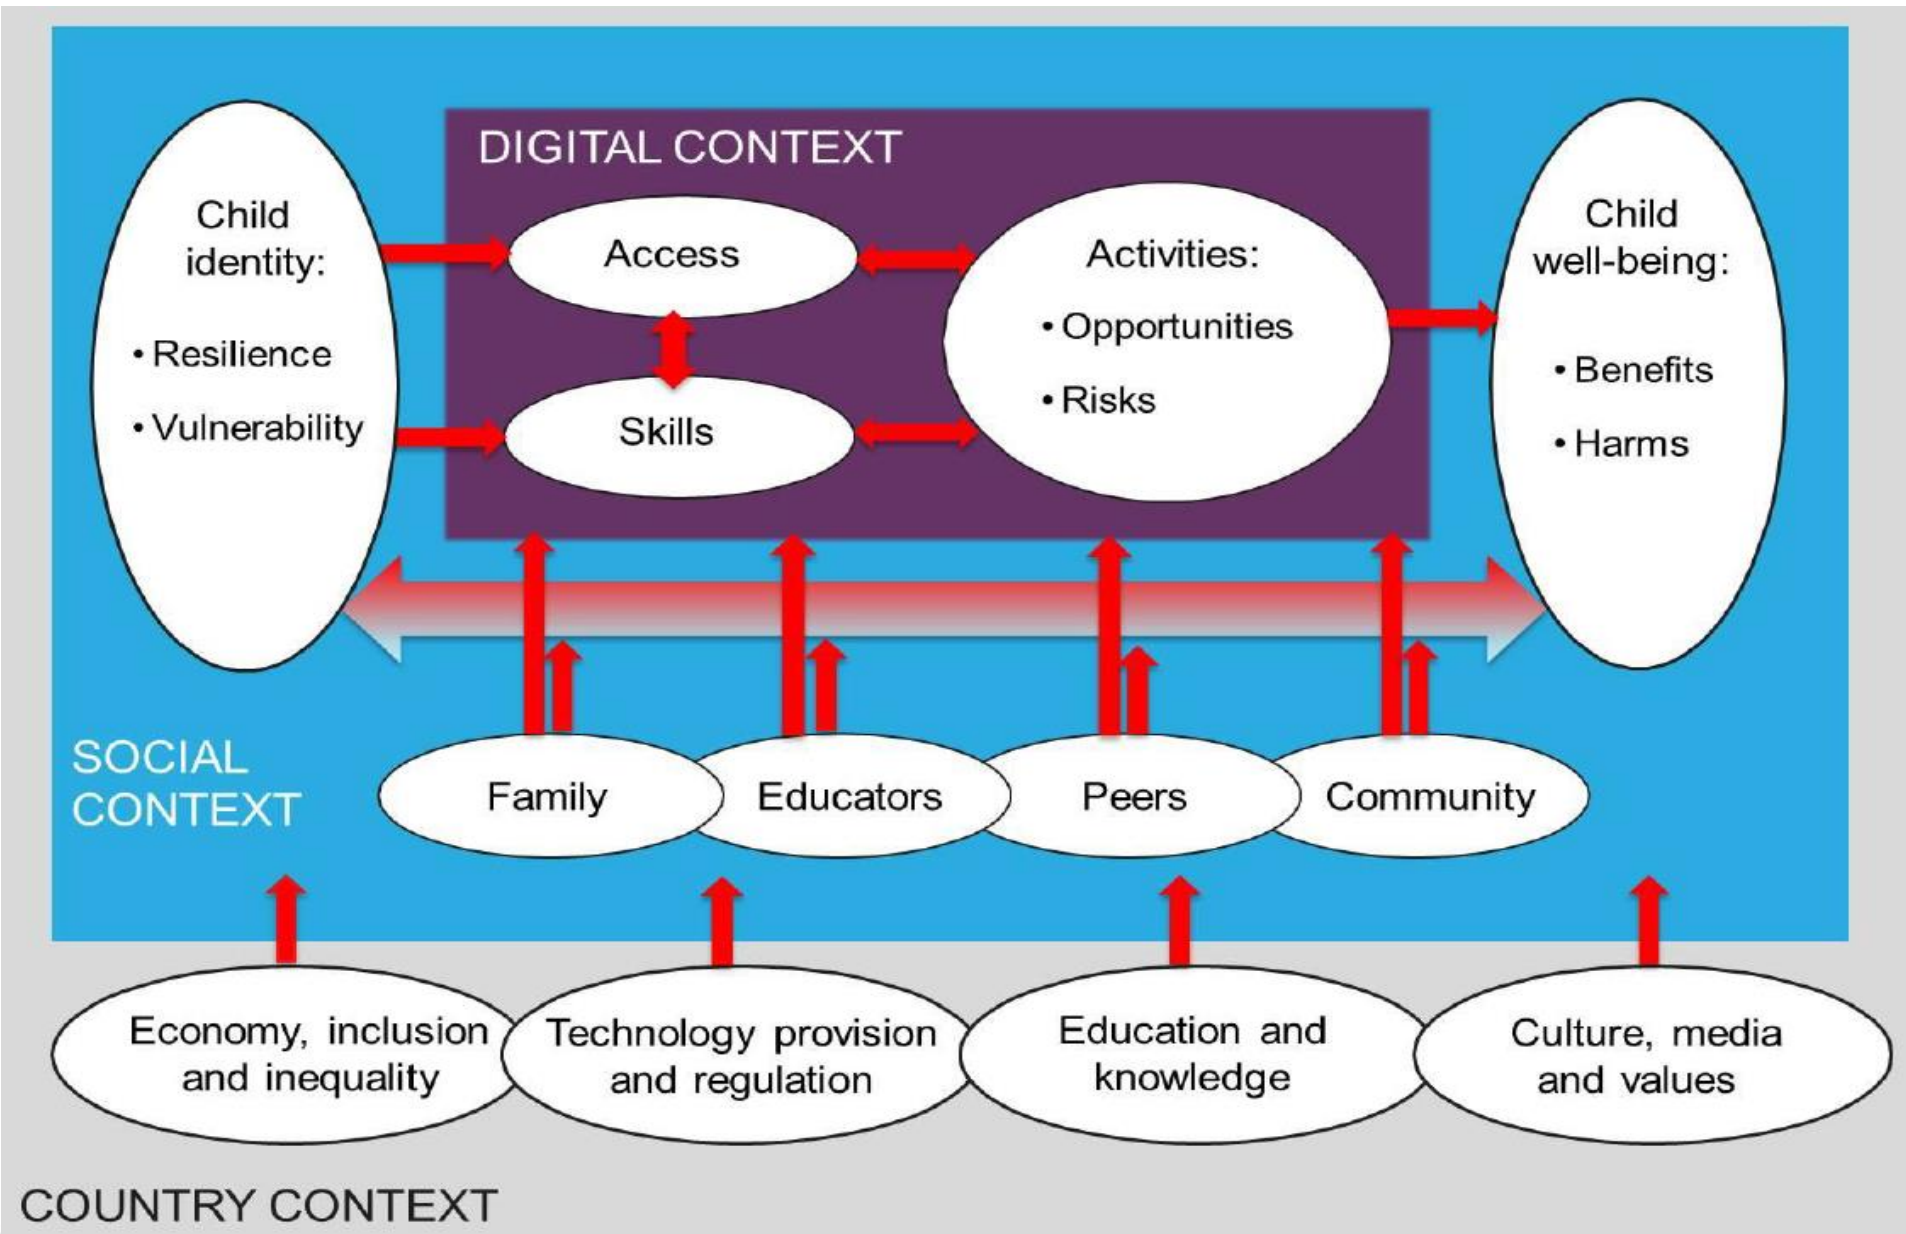

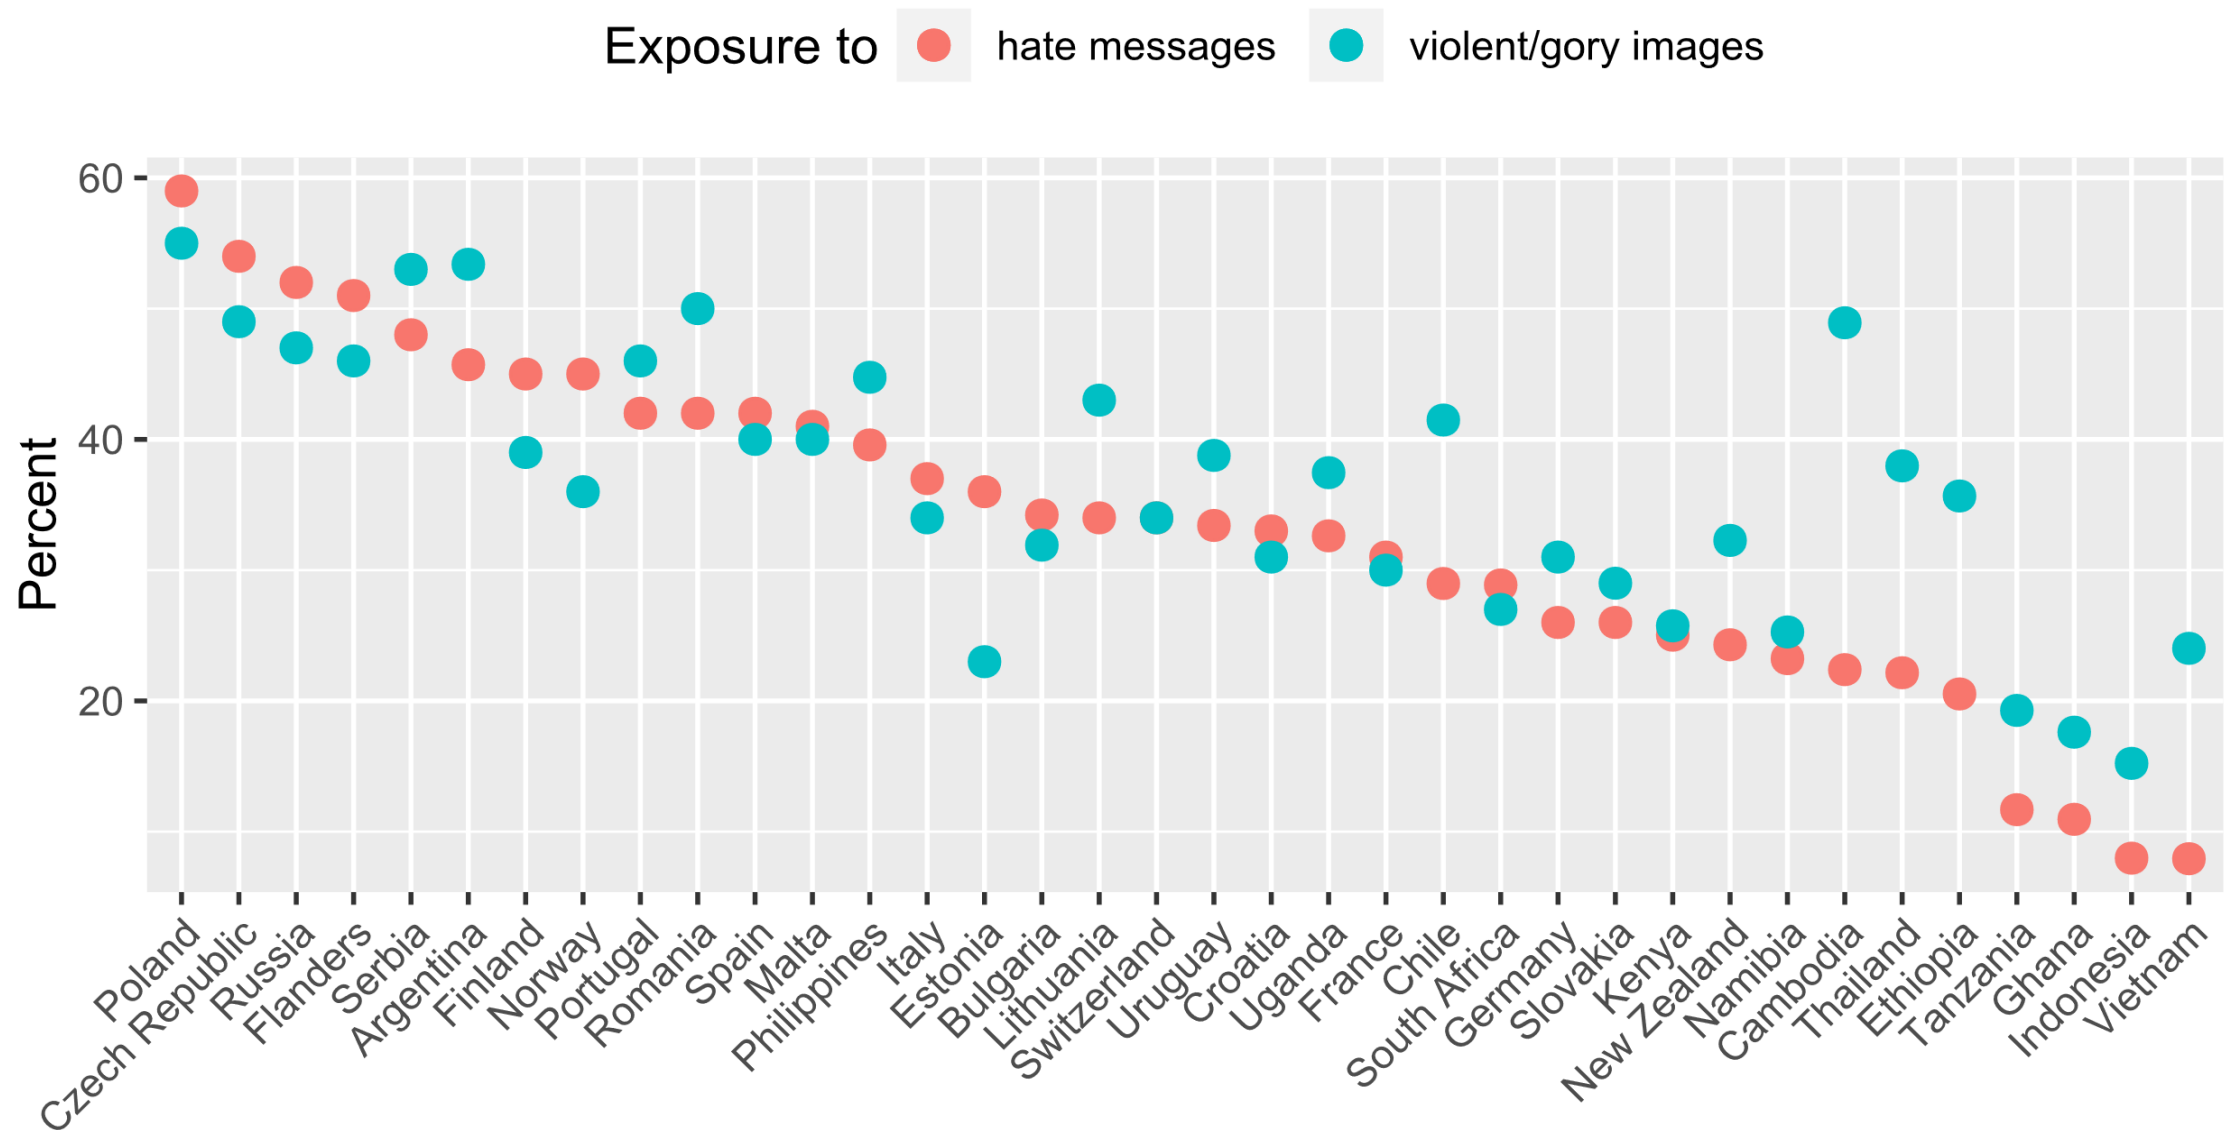

Figure 9.6: Finding information about health

Percentage of 12-16-year-olds who use the Internet to look for health information online at least monthly, by gender

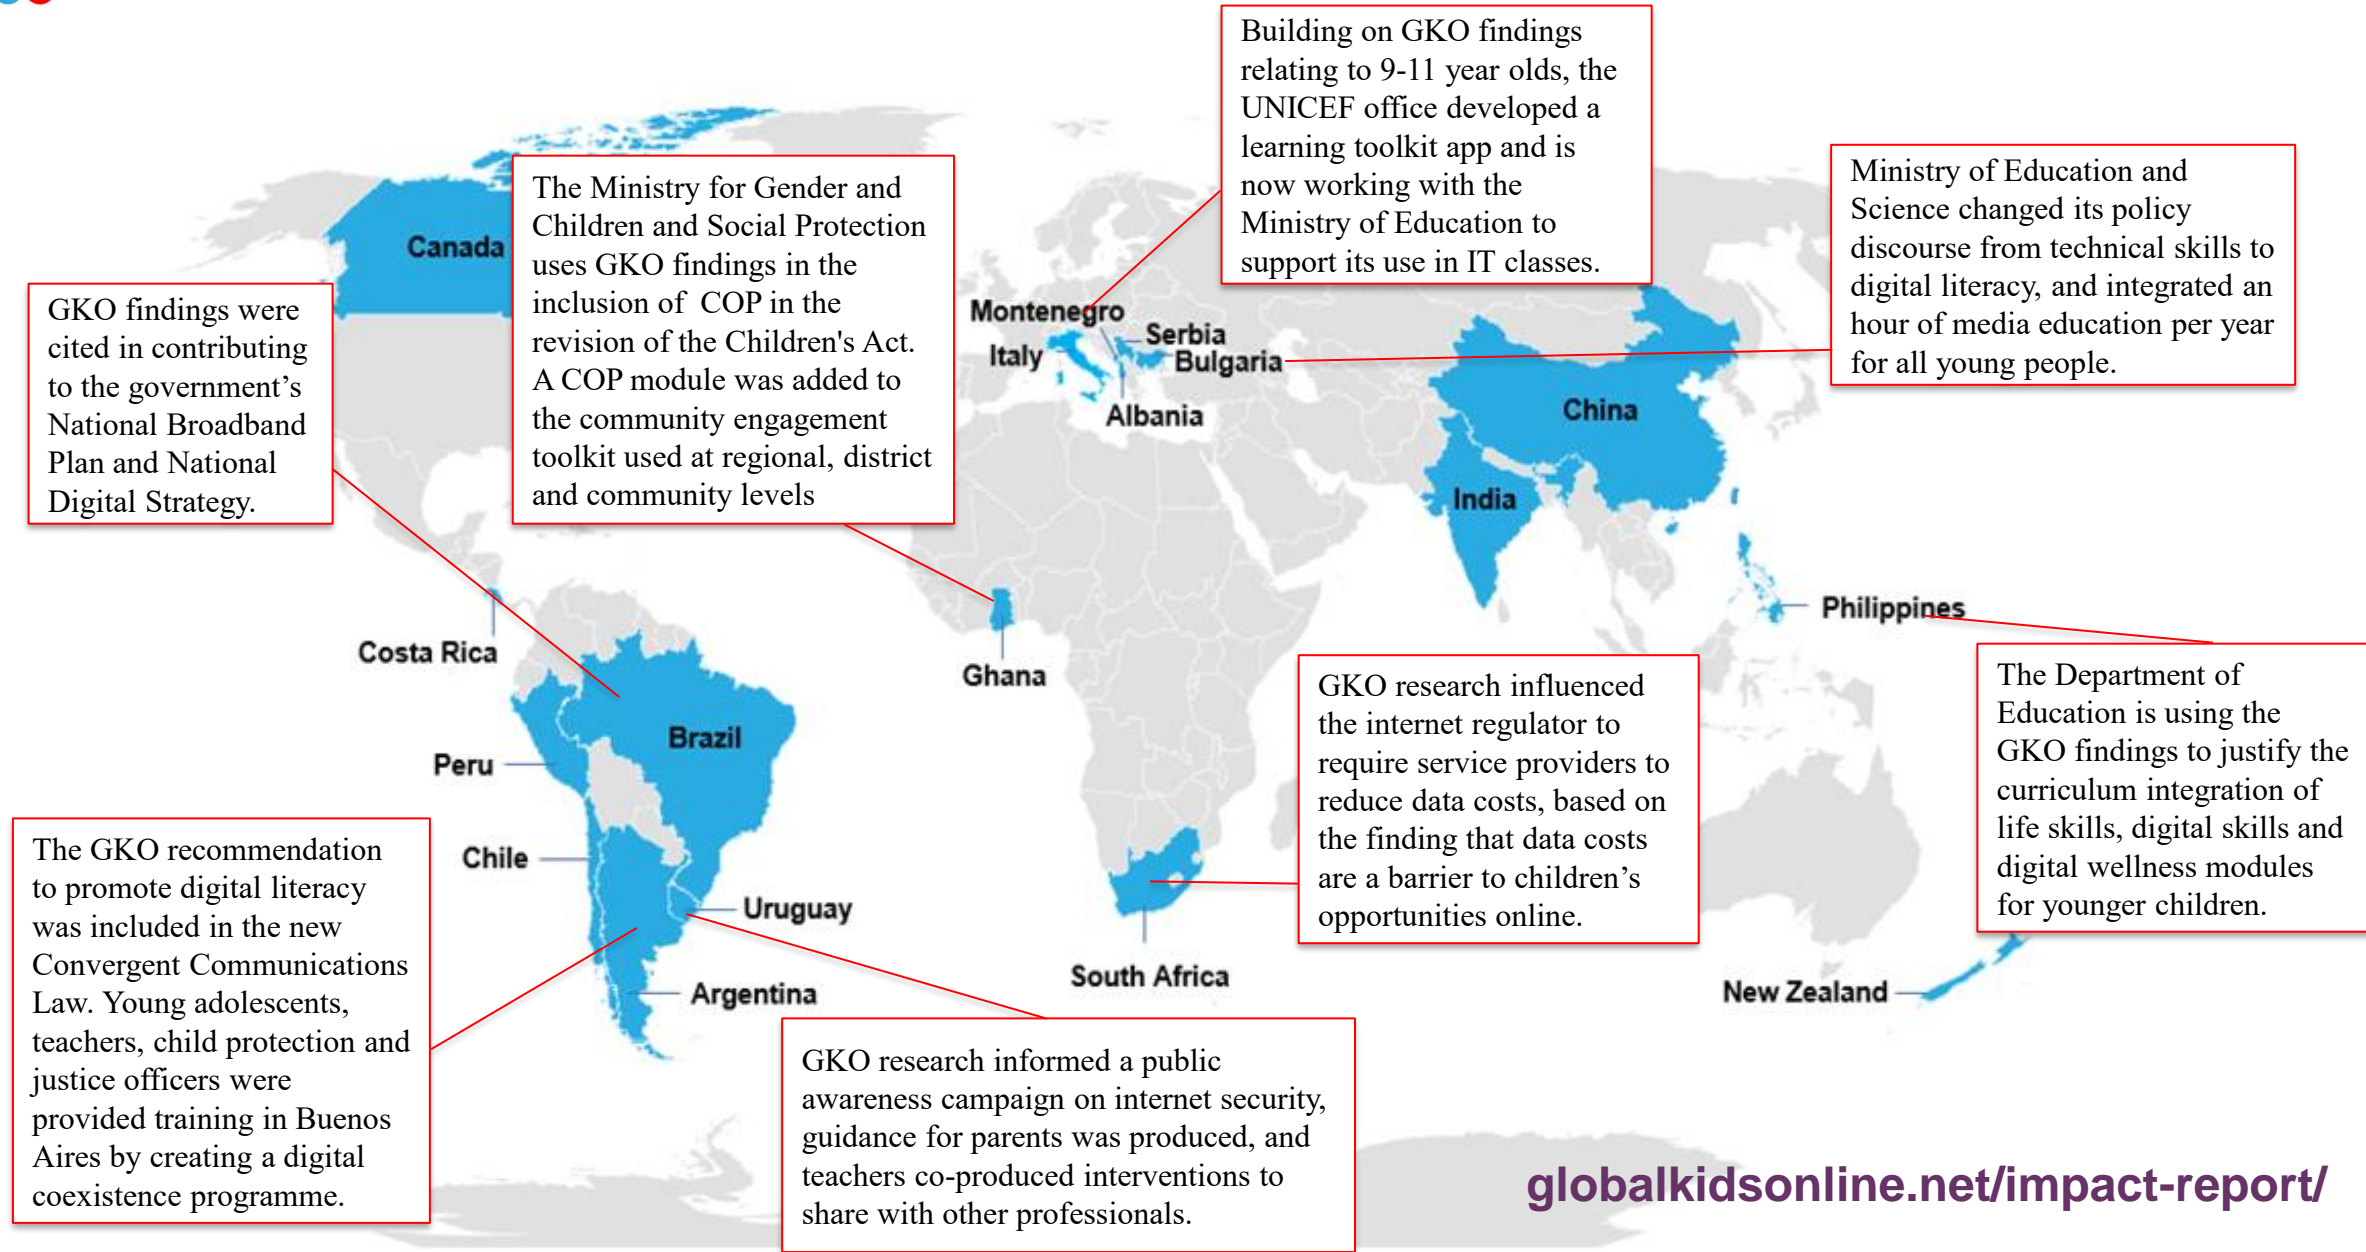

Data from 42,362 internet users aged 12-16 years from 36 countries who took part in Disrupting Harm, EU Kids Online or Global Kids Online between 2016-2021: “In the past year, have you seen online content or online discussions with any of these things: a) Hate messages that attack certain groups or individuals (e.g., people of different religion, nationality, or sexuality); b) Gory or violent images.”

How are children and young people using the Internet to be safer?

Showcasing evidence from 47 countries around the globe, our panel explored children's internet-related risks and opportunities, framed in relation to children's rights. Drawing on the experience of Global Kids Online partners, the panel compared key findings and emerging issues in selected countries in South Asia, Africa and Latin America and discussed some priority areas for the international research and policy agenda on children's digital lives.

GENERAL COMMENTS AND RECOMMENDATIONS

General comment No. 25 (2021) on children's rights in relation to the digital environment

Our Rights in the Digital World

A Report on the Children's Consultations to Inform UNCRC General Comment 25

United Nations

Convention on the Rights of the Child

Distr.: General
2 March 2021

Original: English

CRC/C/GC/25

CRC/C/GC/25

Rights Council and the special procedures of the Council, two rounds of consultations with States, experts and other stakeholders on the concept note and advanced draft and an international consultation with 709 children living in a wide variety of circumstances in 28 countries in several regions.

6. The present general comment should be read in conjunction with other relevant general comments of the Committee and its guidelines regarding the implementation of the Optional Protocol to the Convention on the sale of children, child prostitution and child pornography.

II. Objective

7. In the present general comment, the Committee explains how States parties should implement the Convention in relation to the digital environment and provides guidance on relevant legislative, policy and other measures to ensure full compliance with their obligations under the Convention and the Optional Protocols thereto in the light of the opportunities, risks and challenges in promoting, respecting, protecting and fulfilling all children's rights in the digital environment.

III. General principles

8. The following four principles provide a lens through which the implementation of all other rights under the Convention should be viewed. They should serve as a guide for determining the measures needed to guarantee the realization of children's rights in relation to the digital environment.

A. Non-discrimination

9. The right to non-discrimination requires that States parties ensure that all children have equal and effective access to the digital environment in ways that are meaningful for them.⁴ States parties should take all measures necessary to overcome digital exclusion. That includes providing free and safe access for children in dedicated public locations and investing in policies and programmes that support all children's affordable access to, and knowledgeable use of, digital technologies in educational settings, communities and homes.

10. Children may be discriminated against by their being excluded from using digital technologies and services or by receiving hateful communications or unfair treatment through use of those technologies. Other forms of discrimination can arise when automated processes that result in information filtering, profiling or decision-making are based on biased, partial or unfairly obtained data concerning a child.

11. The Committee calls upon States parties to take proactive measures to prevent discrimination on the basis of sex, disability, socioeconomic background, ethnic or national origin, language or any other grounds, and discrimination against minority and indigenous children, asylum-seeking, refugee and migrant children, lesbian, gay, bisexual, transgender and intersex children, children who are victims and survivors of trafficking or sexual exploitation, children in alternative care, children deprived of liberty and children in other vulnerable situations. Specific measures will be required to close the gender-related digital divide for girls and to ensure that particular attention is given to access, digital literacy, privacy and online safety.

B. Best interests of the child

12. The best interests of the child is a dynamic concept that requires an assessment appropriate to the specific context.⁵ The digital environment was not originally designed for

CHILD RIGHTS by DESIGN PRINCIPLES	
	1. EQUITY & DIVERSITY Do you treat all children equally, fairly and support vulnerable children?
	2. BEST INTERESTS Are children’s best interests a primary consideration in product design?
	3. CONSULTATION Are children meaningfully consulted in developing your product?
	4. AGE APPROPRIATE Is your product appropriate for child users or adaptable for different ages?
	5. RESPONSIBLE Do you review and comply with laws and policies relevant to child rights?
	6. PARTICIPATION Does your product enable children to participate in digital publics?
	7. PRIVACY Have you adopted privacy-by-design in product development and use?
	8. SAFETY Have you adopted safety-by-design in product development and use?
	9. WELLBEING Does your product enhance not harm children’s physical & mental health?
	10. DEVELOPMENT Does your product enable children’s learning, imagination, play and belonging?
	11. AGENCY Have you taken steps to reduce compulsive and exploitative product features?

1: EQUITY AND DIVERSITY

QUESTIONS FOR DESIGNERS

SUGGESTED DESIGN TOOLS

Be inclusive, treat everyone fairly and provide for diverse needs and circumstances

Equity and diversity in digital design means that all children, regardless of their characteristics and circumstances, are treated fairly and have equal access to digital products and services, and the opportunity to use them in ways they find meaningful. It also means that children should not be treated unfairly or discriminated against through the design, operation or marketing of digital products that may impact their lives.

The principle of equity and diversity draws together three sets of children's rights ⁶ :

- Non-discrimination: the right to be treated fairly and not discriminated against.
- Family provision and alternative care: to ensure that parents and caregivers are supported, and that children living in alternative care do not miss out.
- Special protective measures: to make explicit provisions for children with disabilities or those living in disadvantaged, marginalised or vulnerable situations, and empower parents and caregivers to support their children.
- Equity and diversity does not mean that all children should be treated just the same, or that innovators cannot tailor their products to particular user groups. But innovators should prioritise fairness by recognising and addressing the diverse needs and expectations of the children likely to use or be impacted by their product or service and taking active steps to avoid or overcome potential forms of exclusion or discrimination. ⁷

I would like to please not make apps so expensive because people can't all buy the apps they want

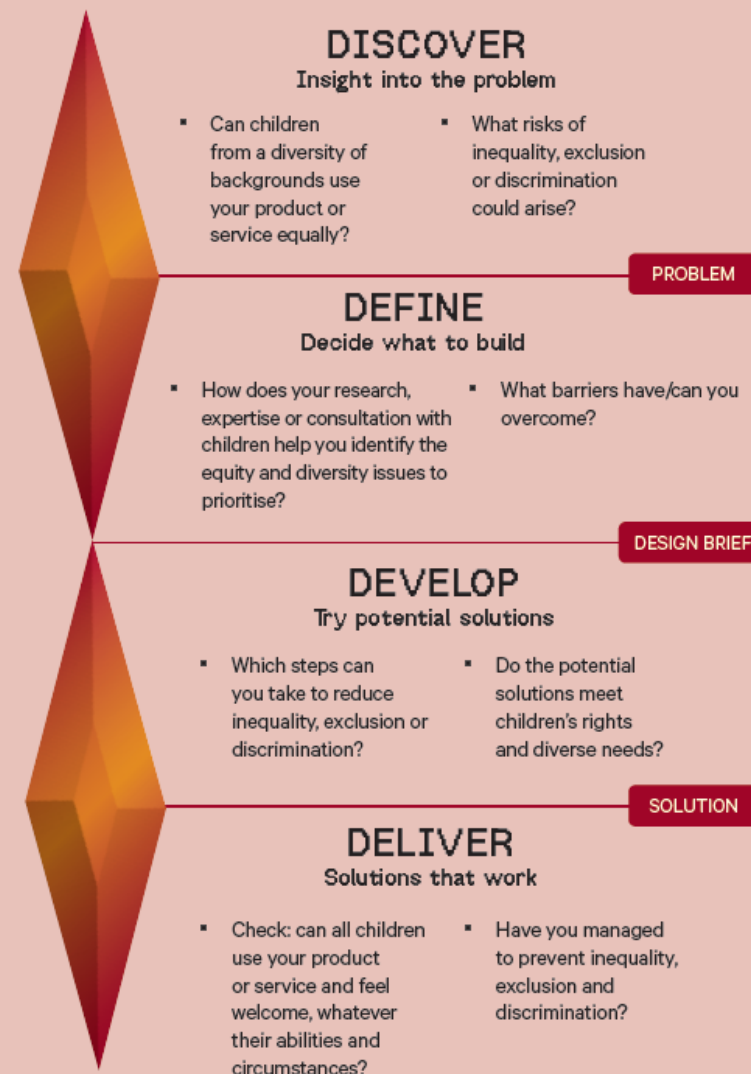

Child aged 7-8, Greater London

RELEVANT LEGAL FRAMEWORKS AND GUIDANCE

Designing equity and diversity in products and services is mandated in specific ways by the UK Equality Act 2010 ⁸ , among other laws, policies and standards. The Equality and Human Rights Commission's Equality Act 2010 Code of Practice gives practical guidance on how

How can you make your digital product or service inclusive, welcoming and fair for all?

Here are some questions to ask yourself throughout your design process:

Thank you
